

Summer Challenge

Shawna Mitchell
12" Diameter wide rim Birch Bowl

This bowl was made from a 13" x 4" thick birch blank. The outside was turned and finished first, then remounted and the front was flattened and the central depression started. I then used carbon paper to trace a grape and leaf pattern on the rim that I put together on my computer. Then I used a Dremel tool to route out the pattern 3/8" deep that I filled with purple or green epoxy. When Hardened I remounted the piece and turned the face flat and sanded and polished the rim, then finished the central bowl.
