## NWG Summer Challenge

Cherry Vase

The vase is  $10 \frac{1}{2}$ " tall and  $5 \frac{1}{2}$ " at the widest diameter.

I used my Carter steady rest for turning the inside of the vase and for turning off the tenon and incorporating my decorative rings on the bottom of the foot.

As I don't have a deep hollowing jig and I couldn't get the tool rest inside the vase I had to get a long handle in order to have some control. The two 17" handles coupled together did the job.
